

 ASKO

OPERATING INSTRUCTIONS

Drying cabinet
DC7774V.W.AU

Read the instructions before using the machine.

Dear ASKO customer,

Congratulations on making an excellent choice, and welcome to the ASKO family, a global family with its roots in Sweden.

We at ASKO thank you for your trust and hope that you will enjoy using your new drying cabinet.

A good drying cabinet should be well designed, dry clothes well, have a low environmental impact, be user-friendly, save time and energy, have a long service life and be reliable. ASKO offers you all these features.

When you buy an ASKO product you can be sure that the inside is just as good as the outside and that the ethics and morality that go into building this product are just as high as the quality and function you are getting. That's what Swedish quality is all about.

Before using the product for the first time, please read the user instructions and the advice on caring for the product. This will help you get the best possible results from your product and all its functions.

If you have any questions, do not hesitate to call us or to contact us through our website.

Best wishes from Sweden and the ASKO team.

THIS USER MANUAL

The contents of this user manual describe the **function** and **operation** of the drying cabinet and contain instructions for **installation and maintenance**.

IMPORTANT SAFETY INFORMATION

This drying cabinet complies with applicable safety requirements. Incorrect use may, however, lead to personal injury and damage to objects.

This advice on safe operation has been compiled so that you can avoid incorrect use and unnecessary risks of accidents and should be read before the drying cabinet is installed and used.

CAUTION: This equipment is only intended to be used to dry textiles washed in water.

Applicable to installation in the EU

The drying cabinet can be used by children over the age of 8 and persons (including children) with various disabilities or inadequate experience and knowledge, provided they are kept under supervision or are given instructions on how to use the appliance in a safe way and understand the risks that use entails.

Children must not play with the appliance.

Applicable to installation in countries outside the EU

The appliance is not intended for use by persons (including children) with various disabilities or inadequate experience and knowledge.

They may use the appliance only under supervision or if they have received instructions on how to use the appliance from a person who is responsible for their safety.

Children must be supervised to ensure that they do not play with the appliance.

■ Applicable to all installation

The drying cabinet must be installed and kept indoors.

If the power cord is damaged, it must be immediately replaced, and this must be done only by the manufacturer, the manufacturer's service agent or similarly qualified persons in order to prevent danger.

Follow ASKO instructions in repair and replacement of parts

FOR A HEALTHY ENVIRONMENT

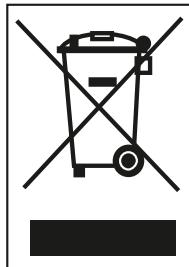

PACKAGING MATERIALS

The packaging protecting the drying cabinet against damage in transit has been chosen with concern for the environment in mind and is therefore recyclable.

Returning packaging to the material cycle means reduced consumption of raw materials and lower levels of waste.

MANAGEMENT OF END-OF-LIFE DRYING CABINET

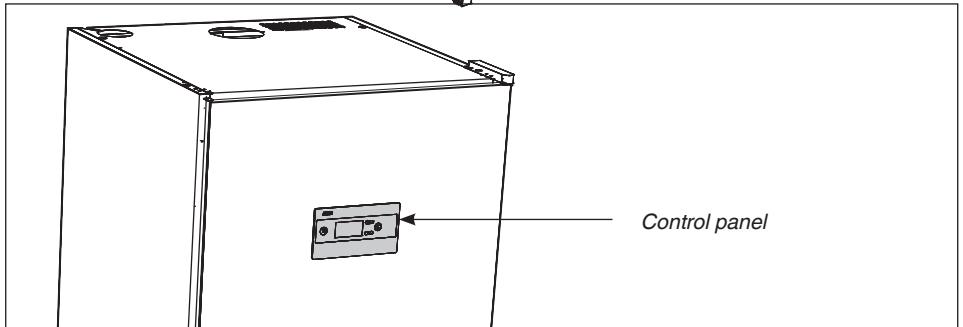

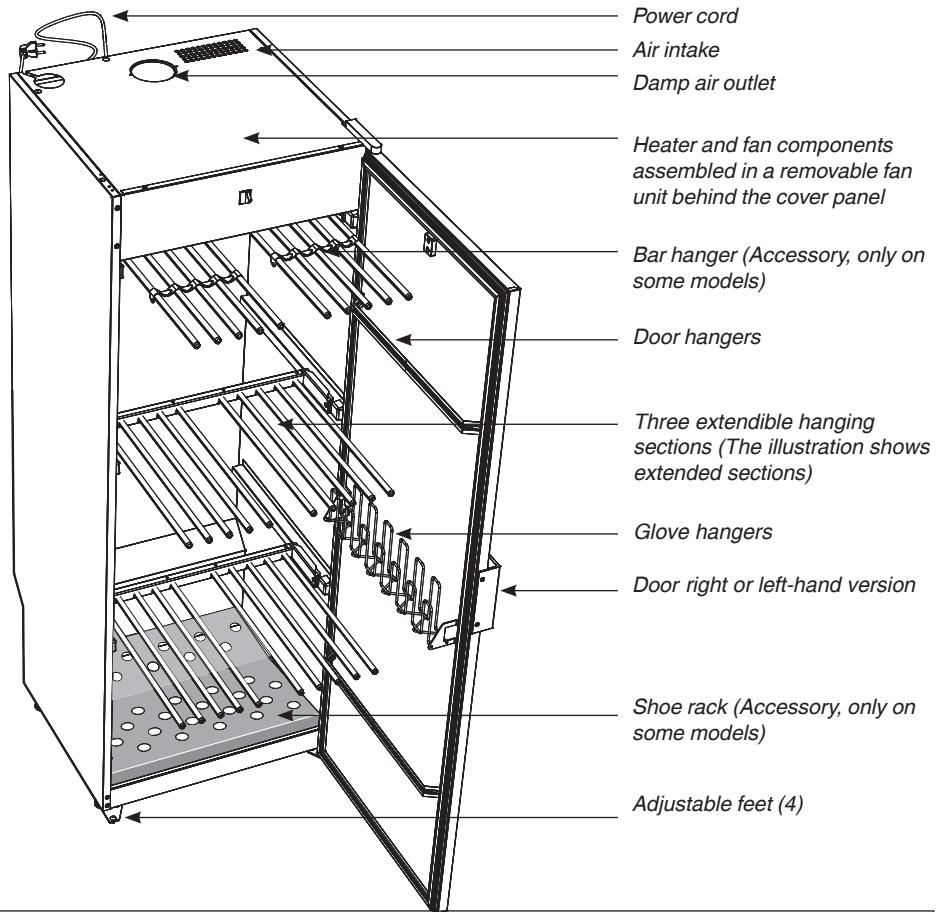

When the drying cabinet has reached the end of its life it must be taken to a recycling station for disposal. Many parts can be re-used, but the cabinet also contains other material that must be dealt with correctly. The drying cabinet, or parts of the cabinet, must therefore never be disposed of with household waste as this can lead to health risks and harm to the environment.

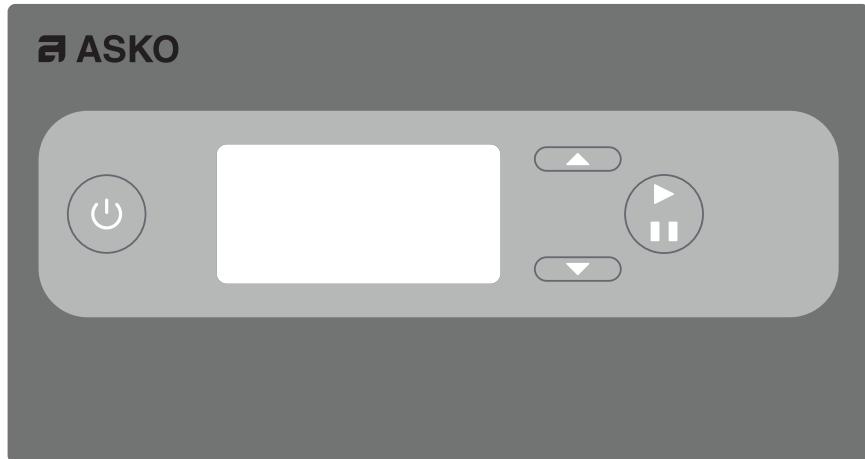

The end-of-life drying cabinet must instead be taken to a recycling station. Check with your dealer if necessary.

All the plastic parts of the drying cabinet are marked with internationally standardised symbols. The parts can therefore be recycled in an environmentally friendly way by waste separation at source.

COMPONENTS

CONTROL PANEL

The drying cabinet is equipped with four automatic programmes and four manual programmes for different types of garments. These programmes are set through programming menus using the buttons on the menu panel. Several languages can be handled.

BUTTONS

ON/OFF

START starts and
STOP stops the programme.
OK confirms selection

ARROW UP, increase the value or step in one direction through the programmes.

ARROW DOWN, reduce the value or step in one direction through the programmes.

DISPLAY

The display has two rows with 6 symbols on each row. During the drying process, the selected drying programme and a progress bar indicating that the process is under way are shown.

LANGUAGE

The following languages can be handled: English, Swedish, Norwegian, Danish, Finnish, Italian, French, German, Portuguese and Dutch.

SETTING

- 1 Make sure that the drying cabinet's main **ON/OFF** switch is off. The display is unlit.
- 2 Hold in the **ARROW UP** and **ARROW DOWN** buttons and press the the main **ON/OFF** switch to the "ON" position. The display lights up and "P 105", the parameter for language setting, flashes on the top row. If any other value is shown, use the **ARROW UP** or **DOWN** buttons to step through to the correct parameter.
- 3 Press **START/STOP** to confirm.

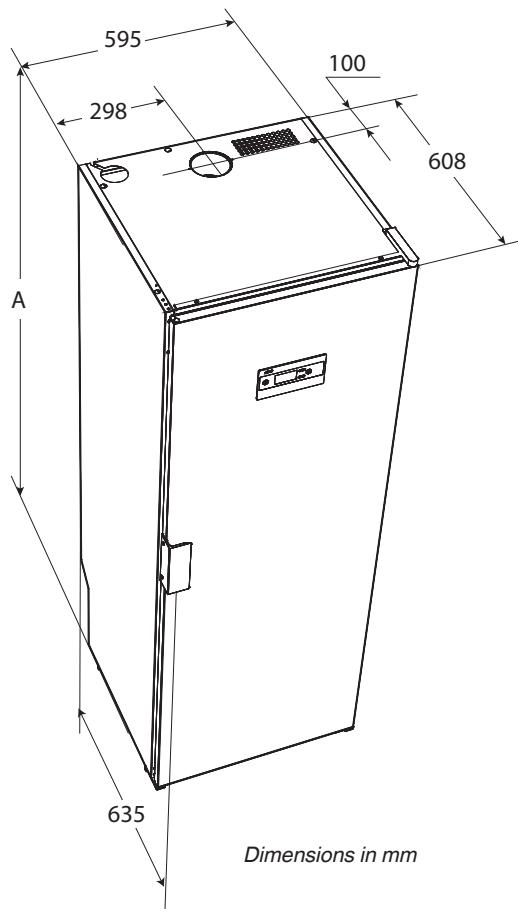

The row for the current language now flashes. The languages have a numbering system as shown in the list below.

- 4 Step through to the desired language using the **ARROW UP** and **DOWN** buttons.
- 5 To save the set value, press **START/STOP**.
- 6 To return to operating mode, press **ARROW DOWN** and **START/STOP**.

Language symbol	Display language
0	English
1	Swedish
2	Norwegian
3	Danish
4	Finnish
5	Italian
6	French
7	German
8	Spanish
9	Portuguese
10	Dutch

POSITIONING THE DRYING CABINET

- ❑ If the dryer cabinet is to be connected to the exhaust air ventilation this must be available in the premises.
- ❑ An earthed power outlet must be available within 2 m of the top section of the dryer cabinet. The dryer cabinet has a 2 m long earthed cable with plug connected at the top.
- ❑ The power outlet must be positioned so that an extension cord is not necessary.
- ❑ The power socket should be simple to reach once the dryer cabinet has been installed.
- ❑ Observe this even when the dryer cabinet is installed in an in-built cabinet or the like. See the section 'Electrical installation'.
- ❑ The floor where the cabinet is to be positioned must support a weight of about 60 kg.
- ❑ The floor must be flat with a drop of max 2,5 cm below the cabinet.
- ❑ The dryer cabinet is only intended for placement indoors with a temperature over 0 °C.
- ❑ The dryer cabinet must not be placed in environments where high-pressure washers are used for cleaning.

Cabinet designation	A mm
DC7774V	1700

INSTALLATION

UNPACKING

NOTE: The drying cabinet must be handled carefully if it is only standing on its pallet. **RISK OF TIPPING OVER.**

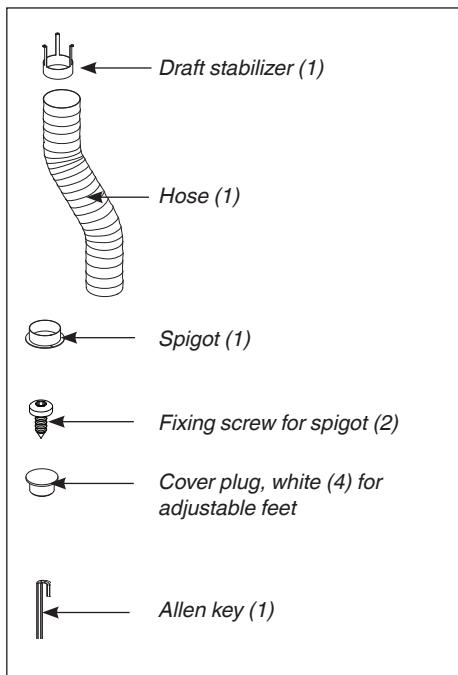

Check that the product has not been damaged in transit. Any damage in transit must be reported to the dealer within 7 days.

Complete delivery must include:

- Cabinet with pre-installed fan unit
- Installation kit
- User manual

Installation kit,

- for cabinet

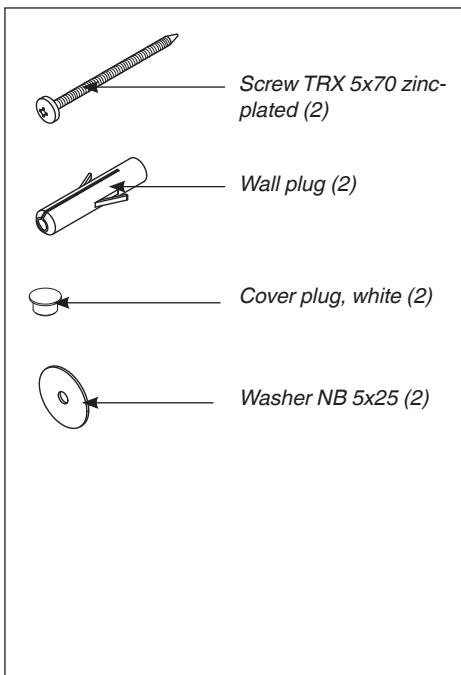

After unpacking, check that the product is free of faults. Damage, defects and any missing parts must be immediately reported to the dealer.

Check that all transportation securing devices have been removed before connecting the dryer.

Packaging materials such as plastic and Styrofoam should be kept out of the reach of children.

- for wall fixing

REHANGING OF DOOR

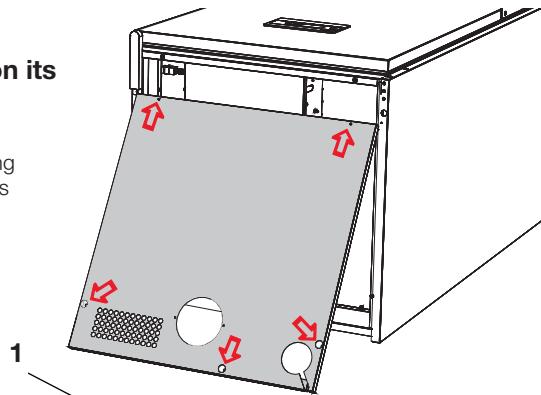

The pictures below illustrate rehanging from right-hung door to left-hung.

Rehanging kit

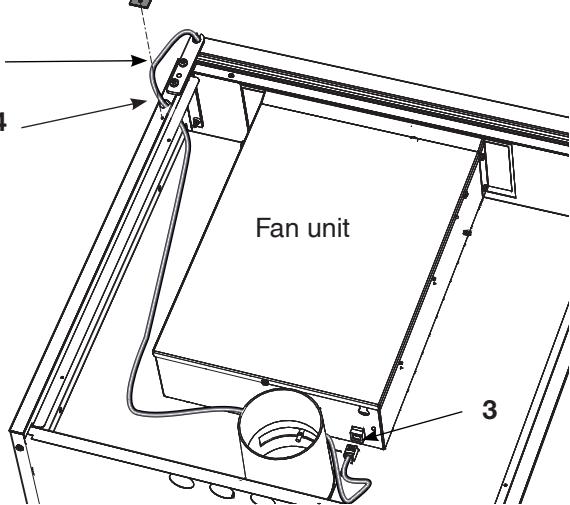

For rehanging, a rehanging kit must be ordered from the supplier of the cabinet. The kit consists of a new upper hinge, as the left and right hinges are not interchangeable. The kit also includes a control cable for fitting in the door with associated hinge bushing.

Lay the cabinet down carefully on its back

- 1 Remove the cover in the top of the drying cabinet. This is attached with five screws at the marking arrows.

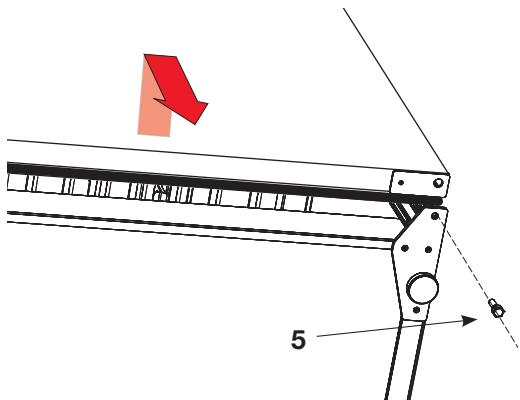

- 2 Remove the protective cover (1) of the upper hinge and release the control cable (2).
- 3 Separate the control cable from the fan unit with the quick connector (3) and pull the cable through the hole (4).

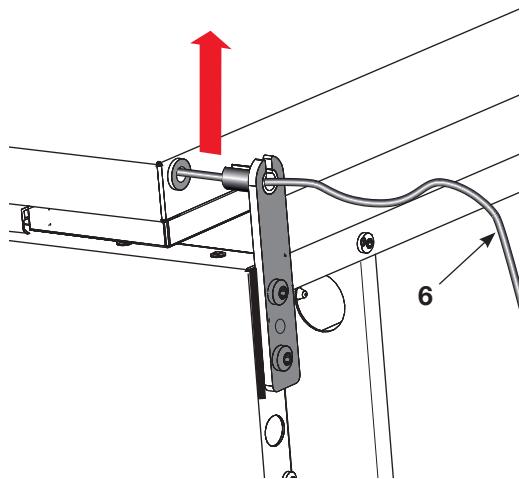

- 4** Unscrew the lower hinge pin **(5)**.

Raise the door slightly from the bottom edge and detach it from the upper hinge, to the extent that the hinge pin is visible. The pin has a recess for the control cable.

- 5** Carefully pull the control cable **(6)** out of the recess in the hinge pin.

- 6** The door, together with the control cable, is now free and can be set aside.

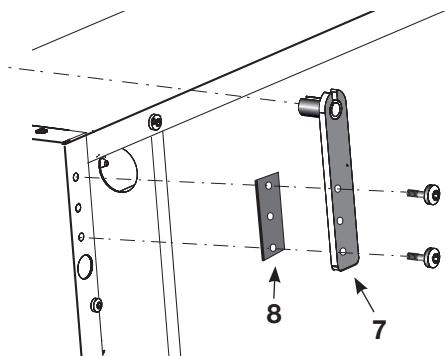

Upper hinge joint with the door pulled down so that the hinge pin is freed

- 7** Detach the upper hinge (**7**) with hinge washer (**8**). **Discard the hinge.**

- 8** Install the new replacement hinge on the opposite side and move the hinge washer across.

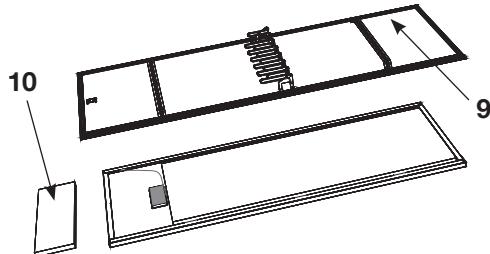

The hinge forms part of the rehanging kit, which can be ordered from the supplier of the drying cabinet.

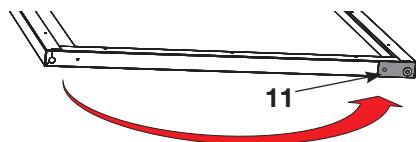

Re-attachment in the door

- 9 Lay the door down with the inside facing up on a non-damaging surface.
- 10 Detach the inner plate (9) with **magnetic strip**, **door hangers** and **glove hangers**. Screws are beneath the magnetic strips.

Remove the insulation (10).

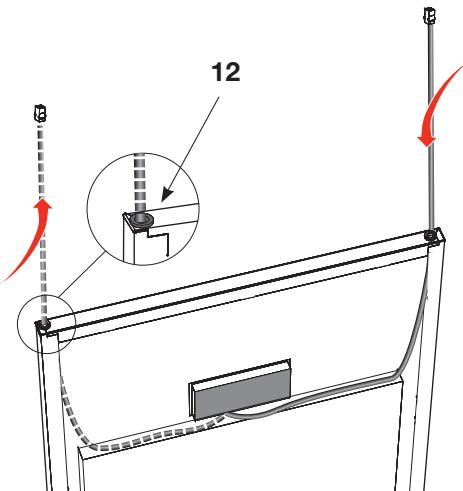

- 11 Detach and transfer the **reinforcement panel** and **lower hinge bushing** (11) in the door to the opposite side

- 12 Detach existing control cable from control panel and pull cable out with hinge bushing (12). Discard the cable as there is a new complete cable in the rehanging kit.

Fit the new cable on the opposite side - press the bushing firmly into the hole and connect the cable to the control panel outlet.

- 13 Move back the **insulation** and **inner plate** with **magnetic strips** and, if applicable, **hangers**.

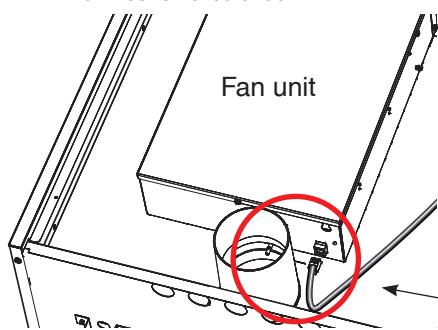

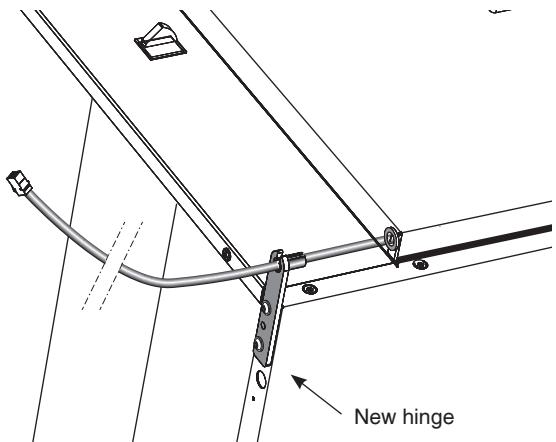

Lay the door in position

- 14 Introduce the operating cable through the recess in the new upper hinge and slide the door up on the hinge pin.

- 15 Install the **lower hinge pin**. **Make sure that the hinge pin is tightened firmly.**

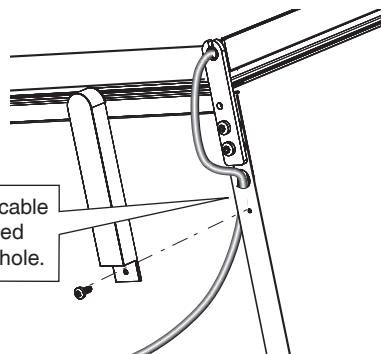

- 16 Connect the control panel (13) to the connector in the upper part of the drying cabinet.

- 17 Refit the drying cabinet cover which was removed under 1.

The control cable
must be pulled
through the hole.

13

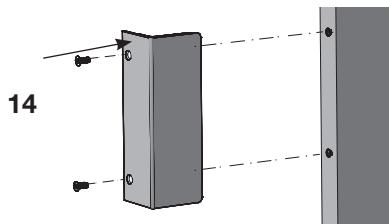

Transfer the door handle

- 18 Transfer the handle (14) to the other side. Fit the cover plugs for the old holes by hand. Cover plugs are supplied in the assembly kit.

CAUTION

The drying cabinet must not be used without being attached to a wall owing to the risk of tipping over forward.

Raise the cabinet

- 19 Raise the cabinet and place it in position and **secure the cabinet to the wall.**

PLACEMENT

The drying cabinet is only intended for use indoors in a dry area.

Do not place the drying cabinet in an area where high-pressure water is used for cleaning.

LEVELLING

The drying cabinet must stand level on a flat surface, resting on all four feet. Use the Allen key supplied and adjust the feet from inside the cabinet. Press the four covering plugs firmly into the holes.

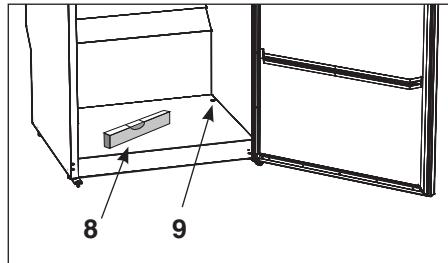

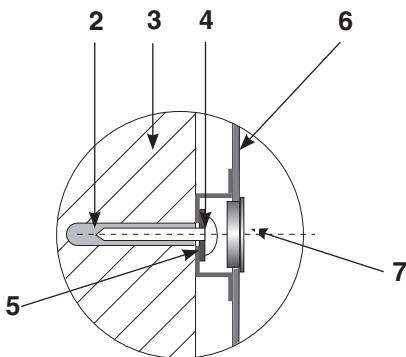

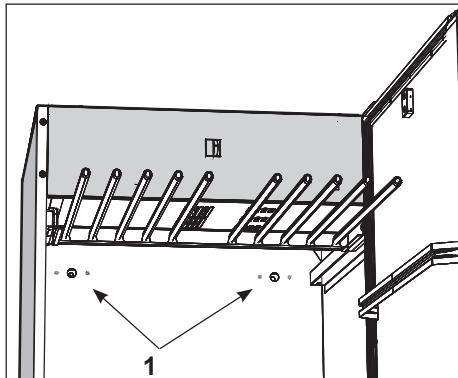

SECURING TO WALL

The cabinet must be secured to a wall to prevent it from tipping over.

- 1 Open the door, slide out the upper hanging section, and drill 8 mm holes in the wall through the two pre-drilled holes in the rear of the drying cabinet
- 2 Install the plastic plugs in the wall. Mount the screw and the washer as illustrated. Press the cover plugs firmly into the holes.

Screws are provided in the assembly kit.

CAUTION: The drying cabinet must not be used without being screwed into a wall due to the risk of tipping over.

1. Pre-drilled holes
2. Plastic plug
3. Wall behind drying cabinet
4. Fixing screws
5. Washer
6. Rear wall of drying cabinet
7. Cover plug
8. Spirit level
9. Cover plug

EVACUATION / AIR SUPPLY

When the cabinet is on, 45 m³ moist air per hour is evacuated. It must therefore be ensured that air can enter the room to replace the moist air that is vented out.

CONNECTION TO EVACUATION

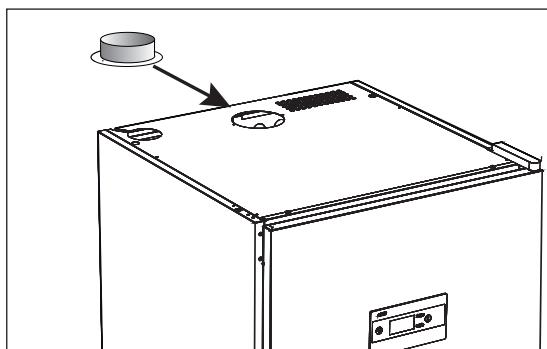

The drying cabinet is connected to an exhaust ventilation unit in accordance with standard.

The drying cabinet can be connected to the evacuation duct in **two ways**, either with a **draft stabilizer** or **permanently fitted to a mechanical exhaust ventilation unit**.

If the drying cabinet is to be connected to an existing ventilation system a draft stabilizer must always be used, so that the general ventilation in the room is not affected.

Permanent fitting must only be carried out when a separate exhaust-air duct is routed to the drying cabinet, the air flow in the exhaust-air duct being adjusted to 45 m³ per hour.

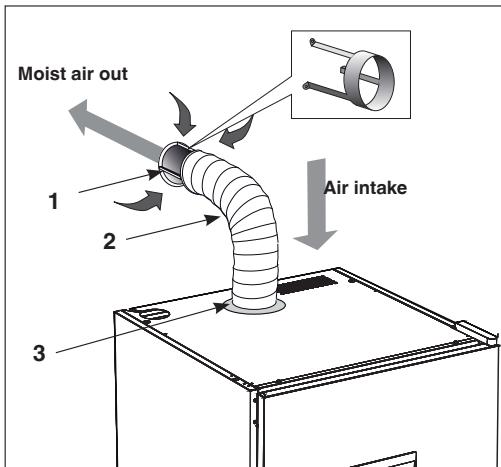

The drying cabinet has been tested and factory-set for connection with a draft stabilizer.

Place the supplied spigot over the hole in the top of the cabinet, insert the screws and secure the spigot.

WITH DRAFT STABILIZER

Connect the flexible hose to the spigot. Connect the other end of the hose to the draft stabilizer and then secure this over the exhaust vent in the room.

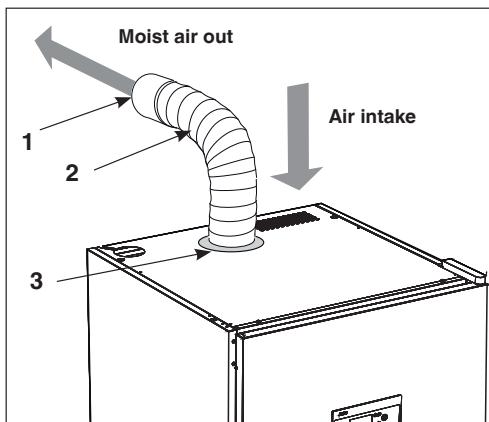

Make sure the air intake is not blocked

Do not connect the drying cabinet to an existing chimney.

1. Draft stabilizer
2. Flexible hose
3. Spigot

PERMANENTLY FITTED TO MECHANICAL EXHAUST AIR VENTILATION UNIT

When the cabinet is permanently connected to a ventilation duct, the whole room is ventilated thought the drying cabinet.

Connect the hose to the adapter between the hose and ventilation duct.

Adapter is not supplied.

The air intake must not be blocked.

1. Adapter
2. Hose
3. Spigot

ELECTRICAL CONNECTION

The drying cabinet should be connected to a 230 V single-phase 50-60 Hz and earthed wall socket.

Fuse 10 A.

The drying cabinet is supplied ready for connection with a cable with an earthed plug.

The drying cabinet should be connected using the connecting cable supplied to an earthed wall socket and must not be permanently wired.

The socket should be positioned so that the plug can be easily pulled out if necessary.

*Check that the supply current matches the data on the rating plate and that the mains lead is earthed correctly according to current standard. We recommend fitting the mains lead with a **residual current device (RCD)**.*

The dryer should be connected to a dedicated circuit.

Do not connect the drying cabinet to the power supply with an extension lead as the necessary safety cannot be guaranteed (risk of overheating).

Electrical connection of the appliance should comply with applicable electrical safety regulations.

The manufacturer disclaims all liability if the electrical connection has not been carried out in the way described in this use and care manual.

If the power cord for any reason is damaged, it must be replaced. A genuine part can be obtained from the cabinet dealer. A replacement cord may only be installed by a qualified electrician.

BEFORE USING THE DRYING CABINET

Read this User Manual before starting to use the drying cabinet.

CAUTION: *Read the safety instructions on page 4 before using the cabinet.*

- 1** Check that the cabinet is securely attached to the wall. See page 10.
- 2** Check that no packaging material has been left behind.
- 3** Use a mild detergent with hot water and wash the inside and outside of the drying cabinet. See also the 'Care' section later in the manual.

OPERATION

ARRANGING ITEMS FOR DRYING

There are three sets of hangers inside the cabinet. Each set has a number of rails for hanging items to dry, as described below. The most efficient drying results are obtained by hanging the items in this way.

- ❑ Hang the items in the drying cabinet according to how much space they require – not according to their weight.
- ❑ For most effective drying, do not position items laid flat on the upper hanger section.
- ❑ Long garments closest to the walls of the cabinet and shorter garments towards the centre of the cabinet. The most effective drying results are achieved by hanging the garments in this way.
- ❑ Fold up the two bottom hanger sections if long garments are to be dried.
- ❑ Hang gloves, caps, scarves and similar items on the hanger strips on the inside of the door.
- ❑ Draw the hanger hooks in the upper hanger section forward so that the washing can be hung more easily. Push them back when not in use.
- ❑ Do not overload the drying cabinet. If you do, the washing will become creased and dry unevenly. Instead, leave a space between the garments if possible.
- ❑ If there is a risk of particular items shedding colour, free space should be left around them.
- ❑ Avoid drying heavy items of clothing together with lighter items as they have very different drying times.
- ❑ Make sure not to hang knitted items. These will stretch unnecessarily as they are heavy when wet.
- ❑ The bar hangers are used to place over the rods on a hanger to be able to hang a shirt, dress or equal garment in the cabinet
- ❑ Shoes, boots are the best placed on the shoe rack to get the best drying performance.

USER TIPS

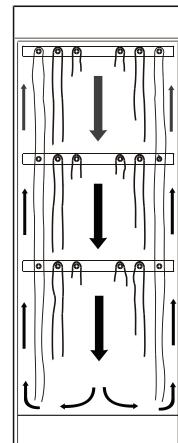

- ❑ Always follow the washing instructions on items of clothing if indicated.
- ❑ If a fabric conditioner or antistatic product is used, the manufacturer's instructions for use of this product must be followed.
- ❑ Remove washing that is already dry. This will reduce the drying time for remaining washing.

AIR FLOW

The illustration shows the air flow in the drying cabinet.

Keep the area around the evacuation duct clear of dust and dirt.

Make sure that the air intake and exhaust duct are not blocked.

NOTE: When the cabinet is cold, it may happen that the door's sealing strip does not close completely. However, this is fully offset when the cabinet is running as the sealing strip expands.

DRYING PROGRAMMES

This drying cabinet is equipped with **automatic programmes** and **manual programmes** for efficient drying of textiles of different types.

The automatic programmes automatically switch off the drying process when the textiles are dry. During the last 10 minutes, the heat is switched off while the fan cools down the textiles (cooling-down period).

The manually time-controlled programmes stop after a set time has been counted down. Cooling also takes place in the last 10 minutes of drying time in this case.

AUTOMATIC PROGRAMMES

- Aut 40° Normal dry.** Used to dry garments of normal thickness.
- Aut 40° Extra dry.** Used to dry thicker garments, deep drying.
- Aut 60° Normal dry.** Used to dry garments of normal thickness.
- Aut 60° Extra dry.** Used to dry thicker garments, deep drying.

40° or 60° is selected with reference to the washing instructions for the garments.

MANUAL PROGRAMMES

- Man 30°.** A time-controlled drying programme that should be selected for delicate textiles that should not be subjected to temperatures higher than 30°.
- Man 40°.** As above, but here a slightly higher drying temperature is permitted.
- Man 60°.** As above, but here the textiles can be dried at max. 60°.
- Man --.** This is a highly energy-efficient drying programme without heat, where the washing is dried only by the fan.

30°, 40° or 60° is selected with reference to the washing instructions for the garments.

NOTE: It is very important to follow the washing instructions applicable to the textile concerned when selecting the drying programme.

CHILD LOCK

To ensure that the drying process is not halted or started by mistake, a child lock function can be activated.

FUNCTION OF THE CHILD LOCK

Activation buttons must be held down for at least 3 seconds (the delay time).

ACTIVATION/DEACTIVATION OF CHILD LOCK

The child lock is activated and deactivated using a setting parameter described on page 21. When the button is activated, a clock symbol appears on the display.

STARTING AN AUTOMATIC PROGRAMME

Start the drying cabinet by pressing ON/OFF.

The display lights up and shows the last used programme.

Ex. **AUT 40° Normal dry** The text flashes.

If this is OK - **press OK**, the process starts.

or select a different programme with **ARROW UP**

ARROW DOWN + OK, the process starts.

STARTING A MANUAL PROGRAMME

Start the drying cabinet by pressing ON/OFF.

The display is lit and shows the last used programme,

Ex. **MAN 40°** The text flashes.

If this is OK - **press OK** the default or last used drying time flashes,

Ex. **2:30** (two hours 30 minutes)

If this is OK - **press OK** the process starts at once, in this example a Man 40° programme, where the time is counted down from 2½ hours.

or select a different programme with

ARROW UP (increases drying time)

ARROW DOWN (reduces drying time) + **OK**

the process starts with a Man 40° programme with a new drying time.

A different manual drying programme is selected in the same way as above.

If the child lock is activated, hold this button down for at least 3 seconds.

FACTORY-SET DRYING TIMES FOR MANUAL PROGRAMMES

Man 30° 2:30 (two hours, 30 minutes)

Man 40° 2:30

Man 60° 2:30

TIPS

- If you have made a mistake or are unsure where you are, you can always press **ON/OFF** and start selecting drying programme again.
- If the door is open when a drying programme starts and the **OK button** is activated, the display will show 'CLOSE DOOR'. Close the door, and the selected drying programme will start.
- The **animated symbol** (bar) on the left-hand side of the display indicates that the drying process is under way.
- When the drying process has finished, the text "END" (flashing) appears. When the **STOP button** is then pressed, or the door is opened, the current programme stops and the display shows the last used programme.
- **NB: In standby mode the display becomes unlit after 15 min and lights up when one of the buttons on the control panel is activated or the door is opened.**
- To halt a drying programme that is in progress, press **STOP**.
- If the door is opened while the drying process is in progress, the fan will continue to run for another 5 minutes. The display will show "CLOSE DOOR" and count down a 5-minute programme pause period.
 - If the door is closed within this 5-minute period, the drying process re-starts.
 - If the door is left open, the drying process is halted after 5 minutes and must be re-started manually.
- If you want to halt the drying process immediately, without a 5-minute pause, press **STOP**.

SETTING OF DRYING PROGRAMMES

Setting to optimise the drying cabinet's automatic programmes is done by pressing the buttons on the control panel when the drying cabinet is **in programming mode**.

Adjustments should only be made if you find that

- the washing does not dry sufficiently
- the washing is over-dried – long drying time

PROGRAMMING MODE

- 1 Make sure that the main **ON/OFF** switch on the drying cabinet is off. The display is unlit.
- 2 Hold down the **ARROW UP** and **ARROW DOWN** buttons **simultaneously** and press the main **ON/OFF** switch to the “ON” position. The display will light up and show “P 105” flashing, which is the first setting parameter in the list below. Then select the relevant parameter using the arrow keys, followed by **OK**.
- 3 To return to operating mode, press **ARROW DOWN** and then **OK**.

PARAMETER LIST

Parameter	Name	Factory preset	Min value	Max value	Signifies
P105	Language	1	0	7	Swedish For setting, see page 14
P115	Child lock On/Off	0	0	1	Off Value 1 = Child lock ON
P2011	Min drying time Aut40°	35 (min)	10	45	Regardless of moisture level, the drying process runs min 35 min.
P2012	Max drying time Aut40°	360 (min)	60	360	Regardless of moisture level, the drying process runs max 360 min.
P2013	Max temp Aut40°	51°	41°	61°	The heating elements switch off if the value is exceeded.
P2014	Exhaust temp. process finished. Aut40°	38°	34°	54°	For Normal programmes the drying process ends with cooling. For Extra programmes the extra drying time starts, followed by cooling.
P2015	Extra drying time Aut40°	30 (min)	10	45	Extra programme drying time after exhaust temp. has been reached.
P2016	Cooling time Aut40°	10 (min)	2	20	Time when only the fan is in operation, without heating elements. Provides more even drying time.
P2021	Min drying time Aut60°	35 (min)	15	45	Regardless of moisture level, drying process runs for min 35 min.
P2022	Max drying time Aut60°	240 (min)	60	360	Regardless of moisture level, drying process runs for max 240 min.
P2023	Max temp Aut60°	90°	61°	100°	The heating elements switch off if the value is exceeded.
P2024	Outlet temp. process finished. Aut60°	48°	40°	73°	For Normal programmes the drying process ends with cooling. For Extra programmes the extra drying time starts, followed by cooling.

Parameter	Name	Factory preset	Min value	Max value	Signifies
P2025	Extra drying time Aut60°	30 (min)	10	45	Extra programme drying time after exhaust temp. has been reached.
P2026	Cooling time Aut60°	10 (min)	2	20	Time when only the fan is in operation, without heating elements. Provides more even drying time.

ADJUSTMENT

Programme **Aut 40° Normal** is controlled via **exhaust air temp. sensor**

Programme **Aut 40° Extra** is controlled via **exhaust air temp. sensor** and a **time factor**.

Programme **Aut 60° Normal** is controlled via **exhaust air temp. sensor**.

Programme **Aut 60° Extra** is controlled via **exhaust air temp. sensor** and a **time factor**.

The automatic programmes stop automatically when the washing is dry.

To decide whether the washing is dry, the actual exhaust air temperature is compared with a parameter, **P2014 for 40° programmes** and **P2024 for 60° programmes**.

For **Aut 40° Extra**, an extra drying time is also added according to parameter **P2015**.

For **Aut 60° Extra**, an extra drying time is also added according to parameter **P2025**.

It is primarily these four parameters that are adjusted to optimise the drying processes of the automatic programmes.

Aut 40° Normal and **Aut 40° Extra** are adjusted with **parameter P2014**.

Aut 40° Extra is additionally adjusted with **parameter P2015** (extra drying time).

Aut 60° Normal and **Aut 60° Extra** are adjusted with **parameter P2024**.

Aut 60° Extra is additionally adjusted with **parameter P2025** (extra drying time).

If it is found that the washing does not dry sufficiently, the parameter value is **increased**.

If it is found that the washing is over-dried, long drying time, the parameter value is **reduced**.

Drying processes must always be optimised in small steps; start by adjusting the parameter concerned 1-2 units up or down. Then check the result after the next drying process and if necessary make a further adjustment.

PROCEDURE

The setting parameters according to the list on page 21 are shown on the display as follows:

the current parameter is shown on the top row of the display, e.g. P 2014,
the set value of the parameter is shown on the bottom row.

- 1** Go to programming mode. See page 20.
- 2** Step through to the relevant parameter by pressing the **ARROW UP** or **DOWN** buttons repeatedly. If you go too far, just continue until the display shows the correct parameter.
- 3** When the display shows the correct parameter, e.g. "P 20 I2", press **OK** to confirm.
The row will then flash with the set value of the parameter.
- 4** Increase or decrease the value by pressing the **ARROW UP** or **DOWN** buttons.
- 5** To save the set value, press **OK**.
- 6** To return to operating mode, press **DOWN ARROW** and then **STOP**.

RESTORING TO FACTORY SETTING

- 1** Go to **programming mode** as described on page 20.
- 2** Hold down the **ARROW UP** and **ARROW DOWN** keys simultaneously and press **OK**.
The factory settings will be saved and the display will show the last run programme.

CARE

CLEANING

NOTE: High-pressure cleaning must not be used.

- The walls of the cabinet should be cleaned with a mild soap solution and a damp cloth.
- Dust tends to gather around the air intake below the cabinet and on the top of the cabinet. This may cause disturbance which in turn may lead to breakdowns in operation.

To avoid these problems, the air intake and the roof of the cabinet should be vacuum-cleaned at least once a year or more often, depending on the environment the cabinet is located in.

SERVICING

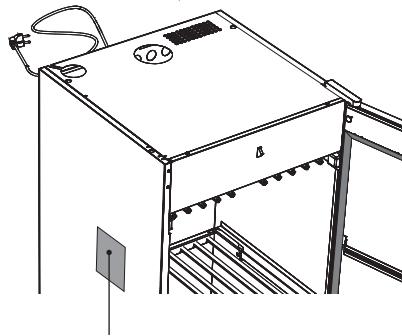

Before contacting the service department, you should find out the name, article number and serial number of the drying cabinet.

This information can be found on the identification plate located inside the cabinet.

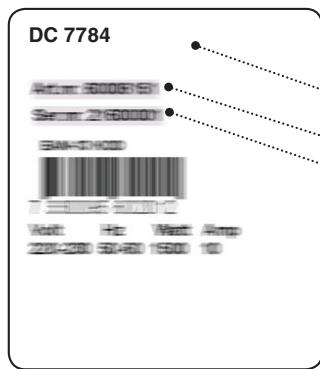

REPLACEMENT PARTS

If the power cord for any reason is damaged, it must be replaced. A genuine part can be obtained from the cabinet dealer.

NOTE: A replacement power cord may only be installed by a qualified electrician.

Rating plate (inside)

Name of drying cabinet
Article number
Serial number (12 digits)

Rating plate for drying cabinet DC 7784

THERMAL CUT-OUT

The cabinet is fitted with a thermal cut-out that is reset automatically when the temperature inside the cabinet has fallen to an acceptable level. The reset delay varies between 10 and 15 minutes from the time when the thermal cut-out was tripped.

The cabinet cannot be restarted while the thermal cut-out is tripped.

If this happens, **always wait for 15 minutes and then try to restart the cabinet before reporting a fault.**

If there are repeated cut-outs, contact your supplier.

TROUBLE SHOOTING

HOW TO DEAL WITH MINOR FAULTS YOURSELF

Problem	What you can do
The drying cabinet does not work	<ol style="list-style-type: none">1. Check that the power cord is connected to a wall outlet2. Check that no fuse has tripped3. Have you pressed the start button?4. Is the door closed?
The display shows an alarm/error code	This should normally not happen, but if an alarm or error code appears on the display, try first to reset the alarm by holding the START/STOP button down for 5 sec. If the problem persists, a service technician must be called.
Drying takes a long time	<ol style="list-style-type: none">1. Check that the correct programme has been selected for the type of laundry2. Check that the laundry is not very wet (poorly spun)3. Check that too much laundry has not been hung up
The washing does not become dry	<ol style="list-style-type: none">1. Check that the correct programme has been selected for the type of laundry2. Check that too much laundry has not been hung up3. Adjust parameters 2014, 2015, 2024 and 2025 according to the chapter on "Setting of drying programme"
The sealing strip does not seal tightly/the door is ajar	Check that the cabinet is level. Check with a spirit level, if necessary adjust with the adjustable feet.

TECHNICAL DATA

Capacity:	4 kg of laundry (cotton)
Evaporation rate:	17 g/min
Electrical supply:	Single phase 220 - 230 V, 50-60 Hz
Fuse:	10 A
Motor:	35 W
Heating element:	1500 W
